**WE EMBRACE YOUR JOURNEY, STRIVING TO  
REMAIN YOUR TRUSTED SUPPLIER  
THAT DELIVERS ON SERVICE, INNOVATION  
AND QUALITY TO ALL OF OUR CLIENTS.**

# WHY CHOOSE US?

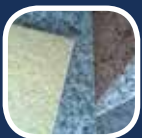

At FabSpeed UK, we pride ourselves on exceptional quality. We work with you from the initial concept, to the final product. In an ever-evolving industry, FabSpeed continue to innovate with second to none attention to detail and quality.

## TRUSTED SUPPLIER FOR HIGH QUALITY PRODUCTS

- ✓ With an in-house design team, we work closely with architects from the get-go.
- ✓ Flexible in design including the ability to vary every moulding by millimetres.
- ✓ Very easy to handle and do not require any mechanical lifting machinery.
- ✓ We can produce the same smooth finish as cast stone.

## WHAT WE DO?

Our aim is to provide lightweight architectural mouldings to both the commercial and residential markets, which would otherwise only be achievable through heavy and expensive stonework. Our products can be incorporated in to new builds and renovations alike.

### STYLES

Along with our standard Bathstone, Portland, Limestone & Buff colours we are able to match most colour which will give your property a unique visual appearance.

### LIGHTWEIGHT

Using the latest computerised technology we cut high density EPS and coat it with a unique impact resistant finish. Any shape can be produced.

### BESPOKE

Often Architects specify mouldings that are their own creation. This would be challenging for stone manufacturer. Our custom moulding abilities remove this dilemma.

### EASY TO INSTALL

Stone-coat is ideally suited as a retro fit option, to enhance the aesthetic appeal of any building, it is easily installed, low maintenance and very cost effective.

# STONE COAT

**Our dedicated production facility allows us to control all aspects of design and manufacture. FabSpeed UK have been adding stunning architectural features for commercial projects all the way through to high end residential developments throughout the UK.**

Stone has long been the symbol of quality and stability and associated with prestige building developments. Through the use of the latest technology with CAD facilities, and modern materials, we are able to replicate even the most intricate architectural detailing, whilst not compromising on quality. When installed, you would not be able to distinguish our product from real cast-stone, yet our products come at a fraction of the weight; removing the need of additional reinforcement to achieve such detailing - A cost saving in itself.

## **CORNICE**

A cornice is a projecting moulding along the top of a building, usually as a decorative eaves feature. Our Elasticoat cornice adds distinctive style to any property, although it is predominantly featured on more substantial buildings.

## **COPINGS**

Manufactured in any size, shape or profile without the need for moulds allowing us to produce bespoke shapes quickly and economically. Asherwood's technique is unique to the company.

## **HEAD, CILLS & QUOINS**

Classical Style and Distinction can be added to a variety of buildings with the use of EPS Quoins, Heads & Cill Stones, pre-fabricated in flexible lengths they are detailed reproductions and can be installed onto new or existing buildings.

## **PROFILE BANDING**

All of our range of profiles offer a lightweight solution reducing build time and transportation costs. Profiles can be made in any size. They are easy to handle, durable and require little maintenance.

## **WINDOW SURROUNDS**

Our window surrounds can be supplied as one piece or cut and fixed on site. Gone are the days of relying on GRP window cassettes with the fidly installation issues. Our window surrounds can be retro-fitted.

# BESPOKE Range

As the momentum for lightweight stone continues to accelerate, so does our investment in keeping up with unusual styles.

Our mouldings can be produced in unique sizes, without any tooling costs. Customers looking for intricate mouldings, or needing an additional styling feature will be able to incorporate this without extended lead-times or incurring unrealistic pattern and mould costs.

Contact us to discuss our range in depth and send over your latest project to [sales@fab-lite.co.uk](mailto:sales@fab-lite.co.uk).

# STONE-COAT METHOD STATEMENT

When comparing Stone-coat to cast stone the cost savings are a no brainer.

If you are an architect or designer that's looking to include lightweight stone in your next project we are happy to discuss any questions you may have. This is so you can feel confident that the product you are specifying will look just as good and work just as well as you intend.

Installation of Fab-Lite's Exterior Mouldings is fast, easy and will save you time and labour.

The architectural mouldings can be cut using a miter saw at the job site and adhesived to the wall, although with correct planning all the moulds can arrive on site as corners or angles. Tempory fasteners can be employed for larger, intreicate mouldings to aid the adhesion period for total peace at mind.
